## 20 Amp Double Pole Switches

### Brief product description:

The subtle design will blend with any décor - suitable for domestic or commercial installations.

2 depths of frontplate available to allow for flex outlet and concealed wiring options.

Switches are available with Neon Indicators, Flex Outlets & printed with WATER HEATER.

### Features:

- White moulded round edge, sleek and slim with softly rounded edges
- Ideal for equipment like water heaters
- Easy to install, supplied with fixing screws and installation instructions
- Flush LED power indicator on 831, 833 & 833WH
- Cable entry in lower edge with removable blanking piece and reversible cord grip on 832 + 833 (832WH / 833WH)
- Frontplate printed WATER HEATER on 832WH & 833WH
- Minimum mounting box depth: 25mm
- Captive, backed out terminal screws for fast installation
- Screw covers for faultless appearance

### Technical Specifications

Standard(s)	BS EN 60669-1
ASTA Approved	Yes, License Number 1074
Rating	20 Amp 250V~
Switch Type	Double pole
Contact Gap	3.0mm minimum
Terminal Capacity	3 x 2.5mm <sup>2</sup> 2 x 4.0mm <sup>2</sup> 1 x 6.0mm <sup>2</sup>
RoHS Directive	No
WEEE Directive	No
Mounting Box Depth(Min)	25mm
Fixing Centres	60.3
Size	86mm x 86mm x 25.5mm

# 20 Amp Double Pole Switches

## Installation Information

### Safety Warning

For your safety, this product must be installed in accordance with local building regulations. If in any doubt, or where required by the law, consult a competent person who is registered with an electrical self-certification scheme.

Further information is available online or from your Local Authority.

Please read carefully and use in accordance with these safety wiring instructions.

Before commencing any electrical work ensure the supply is switched off at the mains either by switching off the consumer unit or by removing the appropriate fuse. Wiring should be in accordance with the latest edition of the IET regulations (BS 7671). To prevent fire hazard always use cable of the correct rating, size and type for the application.

Any bare earth wires must be covered with appropriate green/yellow sleeving.

Warning do not exceed the load rating of this device as stated on the rear of the product.

If in doubt consult a competent electrician.

### Wire Identification – Twin & Earth Cable

EARTH = Green/Yellow Sleeving

NEUTRAL = Black (pre Apr 04) / Blue (after Apr 04)

LIVE = Red (pre Apr 04) / Brown (after Apr 04)

Technical Helpline: 03300 249 279

If in doubt consult a competent electrician.

The ends of the individual conductors should have the insulation removed by approx. 12mm. Any bare earth conductors should be sleeved to within 12mm of the ends. (These details are for general information only and conductor lengths may need to be trimmed in certain installations).

### General Installation Instructions

- 1) If using the new product to replace an old one, note the cable connections and wire up new product in the same way as the old one, with Earthing as stated in these instructions.
- 2) Ensure the mounting box (metal or patress) for either flush or surface mounting is the appropriate size for the product.
- 3) Route the cable through the most suitable entry point of the mounting box. If a metal box is used, a protective cable grommet should be used.
- 4) Cables should be prepared so a sufficient conductor length reaches the terminals. Strip the ends of the individual conductors so that an adequate length enters the terminals.
- 5) Carefully arrange the wiring to lie along the edges of the product or box, keeping the central area clear.
- 6) To assist with the correct installation please consult the appropriate wiring diagram on this leaflet.
- 7) When connecting the new accessory ensure that only the bare end of the wire enters the terminal, and no bare wires are visible. Always tighten the terminal screws securely, but do not over-tighten. An earth connection should always be made between the mounting box earth terminal, and the accessory earth terminal, where fitted. If this earth wire is bare, it is essential that it is sheathed with a length of green/yellow sleeving.
- 8) Carefully position the accessory into the wall box, ensuring that no wires are trapped between the plate and the wall. Do not overtighten the screws. (Fit screw covers + clip-on)
- 9) Once work has been completed correctly, replace the fuse for the circuit, switch the power back on, and test.

The product is now ready for use.

\* Note - If your installation uses a four lug metal mounting box, remove the top and bottom lugs or bend fully back.

### 20 Amp Switch Without Flex Outlet

This product has no cable entry, and should only be used for "hard" wired installations.

Connect the cables as shown in the diagram.

### 20 Amp Switch With Flex Outlet

The flex outlet clamp arrangement comprises a fixed portion integral to the main unit and a movable cord grip clamp portion, held in place by a screwed fixing. The appliance cable exits through the large round aperture on the front face of the unit.

1. Prepare the flexible cable from the appliance as shown in the diagram below.\*

\*NOTE - The appliance cable may be either 3 core (with earth as shown in diagram) of larger size diameter or 2 core (without earth) of smaller size diameter.

2. Loosen the cord grip screw fixing and pass cable through aperture from front face.
3. Connect wires as shown in diagram.
4. Adjust protrusion of cable in clamp so that wires are not taugth and then fully tighten clamp to securely grip cable outer sheath. DO NOT clamp on individual wires.

### Important

The cable MUST be clamped tight on outer sheath to ensure the cable connections are not damaged or disconnected through subsequent movement of cable or appliance.

### Flex Outlet Method – Plastic Frontplates

Connect the cables as shown in the diagram.

All earth wires must be sleeved and terminated to the back box

## 20 Amp And 32 Amp Double Pole Switches

### Brief product description:

A standard range of white moulded wall accessories offering superb quality and exceptional value.

2 depths of frontplate available to allow for flex outlet and concealed wiring options.

Switches are available with Neon Indicators, Flex Outlets & printed with WATER HEATER.

### Features:

- White moulded square edge profile offering exceptional value
- Ideal for equipment like water heaters
- Flush LED power indicator on 931, 933
- All versions have a flex outlet with cord grip in the lower edge with removable knockout.
- Frontplate printed WATER HEATER on 933
- Easy to install, supplied with fixing screws and installation instructions
- Minimum mounting box depth: 25mm
- Captive, backed out terminal screws for fast installation
- Screw covers for faultless appearance

## Installation Information

### Safety Warning

For your safety, this product must be installed in accordance with local building regulations. If in any doubt, or where required by the law, consult a competent person who is registered with an electrical self-certification scheme.

Further information is available online or from your Local Authority.

Please read carefully and use in accordance with these safety wiring instructions.

Before commencing any electrical work ensure the supply is switched off at the mains either by switching off the consumer unit or by removing the appropriate fuse. Wiring should be in accordance with the latest edition of the IET regulations (BS 7671). To prevent fire hazard always use cable of the correct rating, size and type for the application.

Any bare earth wires must be covered with appropriate green/yellow sleeving.

Warning do not exceed the load rating of this device as stated on the rear of the product.

If in doubt consult a competent electrician.

### Wire Identification – Twin & Earth Cable

EARTH = Green/Yellow Sleeving

NEUTRAL = Black (pre Apr 04) / Blue (after Apr 04)

LIVE = Red (pre Apr 04) / Brown (after Apr 04)

**Technical Helpline: 03300 249 279**

**If in doubt consult a competent electrician.**

The ends of the individual conductors should have the insulation removed by approx. 12mm. Any bare earth conductors should be sleeved to within 12mm of the ends. (These details are for general information only and conductor lengths may need to be trimmed in certain installations).

### General Installation Instructions

- 1) If using the new product to replace an old one, note the cable connections and wire up new product in the same way as the old one, with Earthing as stated in these instructions.
- 2) Ensure the mounting box (metal or patress) for either flush or surface mounting is the appropriate size for the product.
- 3) Route the cable through the most suitable entry point of the mounting box. If a metal box is used, a protective cable grommet should be used.
- 4) Cables should be prepared so a sufficient conductor length reaches the terminals. Strip the ends of the individual conductors so that an adequate length enters the terminals.
- 5) Carefully arrange the wiring to lie along the edges of the product or box, keeping the central area clear.
- 6) To assist with the correct installation please consult the appropriate wiring diagram on this leaflet.
- 7) When connecting the new accessory ensure that only the bare end of the wire enters the terminal, and no bare wires are visible. Always tighten the terminal screws securely, but do not over-tighten. An earth connection should always be made between the mounting box earth terminal, and the accessory earth terminal, where fitted. If this earth wire is bare, it is essential that it is sheathed with a length of green/yellow sleeving.
- 8) Carefully position the accessory into the wall box, ensuring that no wires are trapped between the plate and the wall. Do not overtighten the screws. (Fit screw covers + clip-on)
- 9) Once work has been completed correctly, replace the fuse for the circuit, switch the power back on, and test.

The product is now ready for use.

\* Note - If your installation uses a four lug metal mounting box, remove the top and bottom lugs or bend fully back.

### 20 Amp Switch Without Flex Outlet

This product has no cable entry, and should only be used for "hard" wired installations.

Connect the cables as shown in the diagram.

All earth wires must be sleeved and terminated to the back box

### 20 Amp Switch With Flex Outlet

The flex outlet clamp arrangement comprises a fixed portion integral to the main unit and a movable cord grip clamp portion, held in place by a screwed fixing. The appliance cable exits through the large round aperture on the front face of the unit.

1. Prepare the flexible cable from the appliance as shown in the diagram below.\*

\*NOTE - The appliance cable may be either 3 core (with earth as shown in diagram) of larger size diameter or 2 core (without earth) of smaller size diameter.

2. Loosen the cord grip screw fixing and pass cable through aperture from front face.
3. Connect wires as shown in diagram.
4. Adjust protrusion of cable in clamp so that wires are not taugt and then fully tighten clamp to securely grip cable outer sheath. DO NOT clamp on individual wires.

### Important

The cable MUST be clamped tight on outer sheath to ensure the cable connections are not damaged or disconnected through subsequent movement of cable or appliance.

### Flex Outlet Method – Plastic Frontplates

Connect the cables as shown in the diagram.

All earth wires must be sleeved and terminated to the back box
